The program currently has over 70 million registered users. What's New When it launched in 1996, Photoshop initially addressed only the photography market. A year later, the program gained the video and graphics market. Key features included creating and editing raster images, like photos or drawings. Today, it has the full suite of tools needed to create and edit all types of digital images, including raster and vector graphics, video, movies, and 3D. Examples of manipulations Photoshop can do include: Laying a filter on a photo to create an "Artistic" effect Adding a 3D effect Creating a computerized look for a photo with Photoshop's clone stamping tool Designing a graphic for use in a piece of art Or a miscellaneous effect, like playing a sound file while creating a new image Getting Started with Photoshop If you're just starting out with Photoshop, you'll want to know some of the basics: There are several ways to start Photoshop: via downloading a free trial or buying the software at a cost of several hundred dollars. Adobe offers two ways to get a copy of Photoshop: on a disk that users can carry around or via download. Photoshop also has a variety of free tutorials available online that teach new users how to use the program. Some tutorials are only available from Adobe, but there are also tutorials from many universities and websites. Watch a Quick Start: Photoshop Tutorial on Windows 7 What's New in Version X.Y of Photoshop Newer versions of Photoshop have new tools and features, such as the addition of the Liquify tool and new GPU-based rendering. Many of the effects that used to require a lot of computing power can now be done using the GPU, like Hair and Facial Blur. How to Use Photoshop As stated above, Photoshop enables users to create, alter, and modify any type of digital image. Photoshop's modular design allows users to edit and change images in any way that suits their needs. Photoshop offers four types of tools that are most useful for image editing. They are: Raster tools Filters 3D tools Image Selection tools Let's look at each tool. Raster Tools Raster tools create raster images. They include things like drawing, making photo montages, and creating web graphics. At the bottom

Genetics and hepatocellular carcinoma. Hepatocellular carcinoma (HCC) is the third most common cause of cancer death worldwide and the fifth most common in the United States. In the United States, the incidence of HCC is increasing in part because of the increase in the incidence of nonalcoholic fatty liver disease. Most patients with HCC have underlying cirrhosis of the liver. Studies with human somatic cell hybrids and in vitro mutagenesis have demonstrated that liver cancer develops when an oncogene is "hit" in a field effect in which the genetic material of a normal liver cell is replaced with that of a malignant cell. The development of HCC is associated with an accumulation of chromosomal alterations that can be separated into loss of heterozygosity of tumor suppressor genes and mutations in oncogenes. These two types of genetic changes occur in different types of tumors and, thus, are useful for the molecular classification of tumors. Our understanding of the molecular mechanisms involved in the development of HCC is increasing and, with these advances, new therapeutic strategies are being developed to treat these malignancies.1. Field of the Invention The present invention relates to a display apparatus, an electronic apparatus, and a method of driving a display apparatus, and more particularly to a structure and a method of driving a display apparatus using a time division system that divides light emission time by light emission periods. 2. Description of the Related Art As an example of a display apparatus using a time division system, there is a display apparatus of the "end of line" type (hereinafter referred to as EOL type). In this type of display apparatus, a display apparatus uses light emission periods in which time is divided. In this case, this type of display apparatus has a disadvantage in that, in a light emission period of a display apparatus, in a case where a light emission period is lengthened, a distance (interval) between display data is increased, and thus there is a concern that image quality degrades. In a light emission period of a display apparatus, if no distance (interval) between display data is short, there is a concern that light emission is not performed accurately and, therefore, image quality degrades. As a technique for reducing the distance (interval) between display data, there is a display technique in which two subpixels that display the same color light and are adjacent to each other in a row direction are connected and the

Q: Accordion w/ foreach I am using the jQuery Accordion and I have a list of countries and a list of people living in that country. The idea is that on a click of a button, it would toggle it's visibility. I have looked around but everything I've found did not quite work. I need to foreach a specific country, then get each item's information, and put it into each list item in the accordion. I'd be happy to provide the code but I'm just too new to it and don't know how to go about it yet. Example code: var eachCountry = function(intCountryCode) { \$('#country').html(""); \$('#country').append(""); \$('#country').append(""); \$('#country').append('Country Name'); \$('#myAccordion').accordion({ collapsible: true }); \$('#sortable li').click(function() { if (\$('#this').children('accordionTitle').toggleClass('open')) { \$('#this').children('accordionTitle').removeClass('open'); \$('#this').children('accordionTitle').html('Close'); } else { \$('#this').children('accordionTitle').removeClass('open'); \$('#this').children('accordionTitle').html('Open'); } return false; }); } A: Try something like this, it seems to be what you are asking for: var eachCountry = function(intCountryCode) { \$('#country').html(""); \$('#country').append(""); \$('#country').append(""); var countryName = 'Country Name'; for (countryIndex in intCountryCode) { \$('#myAccordion').accordion({
