.24.09.2010 . Bentley MicroStation V8i XM  
v8.11.05. 0cc13bf012

A: You can use the below command to achieve that : `sudo apt install python3.3` Hope this helps. Thanks This invention relates to a change-over valve for switching the connection between a brake unit and a brake duct, which consists of a valve member which is axially movable in a valve housing and an overpressure chamber disposed on the side of the valve member which is connected to the brake duct for supplying fluid to the brake unit, and also of a controlling device which is connected in a force-transmitting manner to the valve member, which consists of an electromagnetically actuable armature which is located at a first axial end portion of the valve member and which cooperates with a permanent magnet which is located at a second axial end portion of the valve member, the distance between the two axial end portions of the valve member being constant when the armature is situated in the magnetic path of the permanent magnet. Such a change-over valve is known from European patent application No. 0068344. The valve member has valve openings which cooperate with a valve seat whose profile is varied such that in the event of a change-over from the normal position to the released position, the valve openings are closed against the valve seat which is then deformed

---

such that they are widened outwards on both sides, the diameter of the valve openings exceeding that of the valve seat in the normal position of the valve member. In the normal position of the valve member, therefore, the valve seat is spaced away from the valve openings, so that the brake duct is then separated from the brake unit and prevented from coming into contact with the wheel brakes of the motor vehicle, but the brake unit can be supplied with fluid by way of a connecting bore which is opened up and the pressure generated by the brake unit is then transmitted to the wheels. In the event of a brake application, the armature of the controlling device is moved into the magnetic path of the permanent magnet. In so doing, the valve member is moved axially relative to the valve housing as a result of the hydrodynamic action of the pressure prevailing on the side of the valve member which faces the valve openings in the normal position, with the result that the valve openings are widened outwards relative to the valve seat and the valve member rests sealingly against the valve seat. As a result, the brake duct is connected to the brake unit and the pressure prevailing in the brake duct is transmitted to the wheel brakes.
