C++ API The C++ API is available in the ObjectARX SDK. The C++ API allows a developer to write applications that use AutoCAD Crack Free Download in conjunction with Visual C++.NET or Borland Developer Studio 6.5 using the C++ classes found in the SDK. The C++ API is intended for creating automation of AutoCAD tools. This is achieved by implementing a script logic component with access to the AutoCAD object model. The AutoCAD SDK includes more than forty C++ classes designed to extend the object model available to the AutoCAD script logic component. The AutoCAD C++ classes can be used to add custom functionality and data to the AutoCAD environment. In addition, the class library allows applications written in C++ to use the C++ API to modify existing AutoCAD applications. AutoCAD SDK documentation is available online and is included in each copy of AutoCAD. Documentation is available by using the help command in AutoCAD. The AutoCAD C++ API includes the object model and all the user interface classes. It also includes classes designed to allow the developer to work with the objects in the AutoCAD object model. The C++ API is easy to use, and the API is designed to be compatible with the LISP and VBA API. The AutoCAD C++ API includes a Visual C++ 6 or Visual C++.NET implementation for compiling C++ programs. A separate file is required to link the AutoCAD C++ API to Visual C++. The C++ API is also available as a.DLL, allowing the API to be used by Visual LISP, Visual BASIC, Visual FoxPro or any other programming language with access to the Microsoft.NET framework. AutoCAD and Visual C++.NET AutoCAD 2008 introduced Visual Studio.NET support, and the following products use the.NET platform: AutoCAD 2009 AutoCAD 2010 AutoCAD 2011 AutoCAD LT 2010 AutoCAD LT 2012 AutoCAD LT 2013 AutoCAD ST 2014

AutoCAD LT 2015 AutoCAD LT 2016 For new projects in Visual Studio.NET, the Visual LISP API may be used. Other options include Visual C# and Visual Basic.NET. Visual Studio.NET and the Visual LISP API can be used in conjunction to create .NET applications that have LIS ca3bfb1094

In recent years, energy saving and environmental protection are required, and a primary energy resource is expected to be changed to renewable energy. Therefore, a solar cell, a fuel cell and the like are considered as electricity sources capable of generating energy by using an inexhaustible energy. Since the solar cell is a cell for directly converting solar energy to electricity, a light of a solar irradiation is directly converted to electricity, so that the energy can be obtained without an additional power conversion device. The solar cell is a power generation device that converts light energy including sunlight into electric energy, and is recently actively studied and developed. In addition, among various kinds of solar cells, a solar cell using copper indium gallium selenide ( $\text{CuInGaSe}_2$ , which is hereinafter referred to as "CIGS") as a photoelectric conversion material is spotlighted since the CIGS type solar cell has advantages in that it can be produced at a relatively low cost and a large amount of power generation can be expected. A photoelectric conversion layer of the CIGS type solar cell generally contains gallium, indium and selenium in a molar ratio of  $\text{In:Ga:Se}=1:2:3$ , and Cu in a molar ratio of  $\text{Cu:In:Ga:Se}=1:1:1:4$ , and a film thickness thereof is on the order of micrometers ( $\mu\text{m}$ ). On the other hand, there are many studies on a method of reducing the thickness of the film for reducing a series resistance of the solar cell. As the thickness of the photoelectric conversion layer is reduced, the molar ratio of In is reduced and a molar ratio of Ga is increased, and accordingly, the In composition ratio of the photoelectric conversion layer is gradually reduced. In this regard, when the In composition ratio of the photoelectric conversion layer is low, indium, which is a material of the photoelectric conversion layer, can be supplied sufficiently from the outside of the solar cell. However, there is a problem in that a gallium electrode in contact with the photoelectric conversion layer is crystallized. This crystallization of the gallium electrode reduces a contact area between the gallium electrode and the photoelectric conversion layer, and accordingly
