In the last years, the cost of aortic disease and its treatment have been increasingly recognized as important. This situation, in combination with the possibilities of using the endovascular approach as a routine procedure, has prompted the performance of cost-effectiveness analyses of aortic reconstruction. The aim of this study was to analyse the healthcare costs in Austria with regard to aortic disease. Data of patients' care between January 1998 and July 1999 were collected by a data recording system. A total of 158 patients (59% male) were included in the analysis. The mean (SE) age at

operation was 67 +/- 9 years. The mean follow-up was 15 +/- 5 months. The average cost of hospitalisation in Austria was found to be about \$3046 per patient-day. Aortic reconstruction increased the cost of hospital stay by a factor of 2 (2.6 +/- 1.6, P // This work is licensed under the Creative Commons Attribution 3.0 Unported // License.
