Darkspeak: Lords of Tarnus - Recommended By: MMO Darkspeak: Lords of Tarnus has an amazing anime style, cute characters, and more importantly really fun combat. It's also got very well thought out quests and a fairly deep story that isn't bogged down by excess dialogue. The combat system is unique in its ability to keep you engaged with it's neat, varied elemental system. It's really hard to put into words, but this game does the best job I've seen at presenting the elemental theory of magic... I would recommend this to anyone with a decent appetite for hack n slash action or fantasy MMORPGs....Expand Wonderful game! It's really fun and unique. I really like the freedom they allow you to use. Because you can not choose a "class", it gives you a lot of freedom as a player. The story is also very different, and creative. The graphics are very good and the lag is not that bad, so I'll give it a 9/10. If you like MMORPGs you will like this one. Well worth the money, you can try it for free before buying it....Expand A post apocalyptic, free to roam, MMORPG, with a really compelling theme (more on that later). The game runs at a solid framerate, and the looting is a breeze. Plasma and urinary concentrations of amino acids in Antarctic and Greenland dogs. Plasma and urinary amino acid concentrations in 50 Arctic and Antarctic dogs were compared with concentrations in 96 healthy Danish control dogs, randomly divided into three age groups: or =7 years. The mean plasma concentrations of all essential amino acids were significantly lower in dogs in the Antarctic than in the Danish controls, except for valine, isoleucine and leucine. The concentrations of the non-essential amino acids were not significantly different. In the Arctic dogs the concentrations of all essential amino acids were significantly lower than in the Danish controls, except for valine, isoleucine and leucine. The concentrations of the non-essential amino acids were not significantly different from the Danish controls. The absolute and relative concentrations of the non-essential amino acids in the Arctic dogs were less than in the Danish controls. The concentrations of the non-essential amino acids were not significantly different. In the Antarctic dogs the absolute and relative concentrations of the non-essential amino acids were significantly lower than in the Danish controls. These results indicate that an apparent nutritional problem is present in the Antarctic dogs, which was not apparent in the Arctic dogs. The physiological significance of the lower concentrations of the non-essential amino acids in the Antarctic dogs remains to be established. Emma Watson, who featured in J.

COMMUNICATION

Online communication has been improved with the introduction of Talk and Private Conversation.

Talk uses a new function called Feed which replaces BuddyList and is exclusively accessible by friends and guild mates.

Each dungeon and world that you travel to has various talk events. You're able to see what other players have talked about and use the information to help your own travel progress.

An alternate conversation mode called Private Conversation has been added to allow more privacy by displaying your conversation topic on your own private town-space.

Some chat features that you used to be able to use only from within a friend's buddy list (such as sending a private message) can now be accessed in Private Conversation as well. This prevents people who aren't friends from viewing private messages the players sent via buddy lists.
